Clean Before Using

Dismantle the grain mill and wipe off all parts with damp cloth, removing any residue from the manufacturing and packaging. Be careful not to lose the small nylon tip on the adjuster knob during disassembly & reassembly.

Assemble Hopper

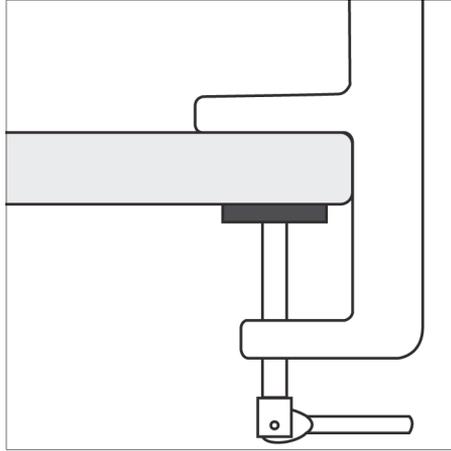

Assemble hopper by lining up the sides of the hopper and firmly pressing them together until both sides are fully touching and no gaps appear on the sides. After correct assembly the hopper should fit snug on the top of the grain mill. If the hopper doesn't fit on the top of the grain mill, the halves have not been pressed far enough together.

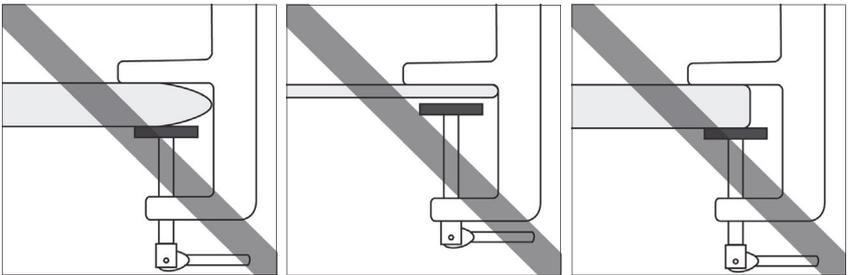

Setup Instructions

Mount firmly on a sturdy table or counter top and secure with clamp screw. See mounting example diagrams below:

Operating Instructions

Select desired texture by turning the adjustment knob clockwise for fine milling and counterclockwise for coarser texture. Turn adjustment knob by hand only. For the finest setting possible **turn adjustment knob fully clockwise until it stops, then back counter-clockwise 1/4 turn** (to prevent over tightening). Then add grain and begin milling. If you desire a more coarse texture turn the adjustment knob counterclockwise a turn or two until output is the desired coarseness. Do not operate mill with adjustment knob tightened all the way clockwise as this may damage milling cones.

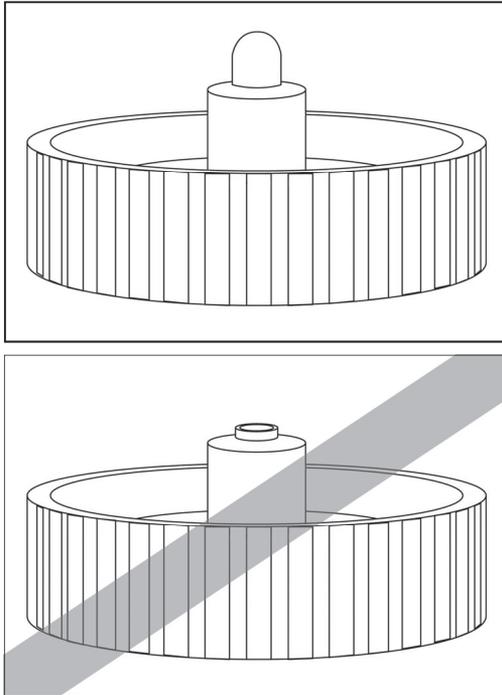

Tips

1. To get the flour output of the grain mill to be the very finest you must start with the grain mill empty of any grain and the adjustment knob turned fully clockwise until it stops, then adjustment knob back counter clockwise 1/4 turn.
2. The grain mill can only be adjusted coarse after grinding has begun. To adjust fine you need to empty the mill of any grain before turning the adjustment knob to a more fine setting. For this reason we suggest the grain mill always start adjusted to the finest setting when starting.
3. While designed primarily for small grains like wheat or rice. The grain mill can grind most dry non-oily food or grain without damaging the milling cones. Some things grind better than others. If in doubt try it!
4. Some larger items such as corn or beans may need to be chopped into smaller pieces before the grinder will accept them. This can be done easily with a blender or food chopper.
5. The flow into the milling cones is gravity fed. This can be problematic for very light items (rolled oats or rosemary for example). We do not recommend using the grain mill with these types of items.

Please note:

The adjustment knob has a nylon tip that helps keep the milling cone adjustment accurate. This must be in place for the adjustment settings of the grain mill to work correctly. **Under normal conditions the tip should last the life of the grain mill.** In the event that the tip receives unforeseen damage or is missing (to prevent this we suggest not loaning the grain mill) please contact customer service for a replacement.

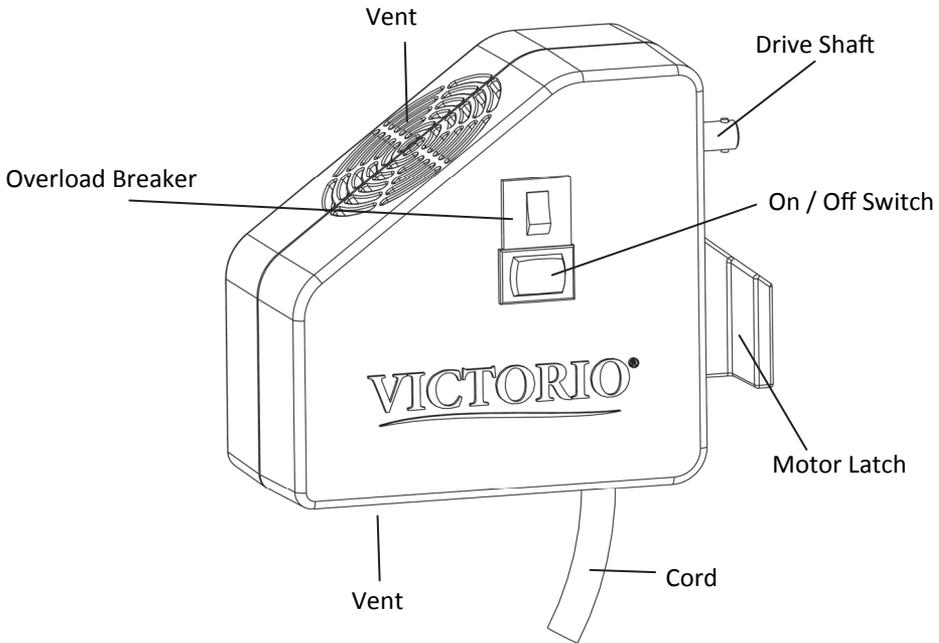

Cleaning

Disassemble and carefully handle small parts so they don't get lost. The grain mill can usually be cleaned with a brush or dry cloth. If thorough cleaning is necessary, hand wash in warm (not hot) water and dry all parts thoroughly. Do not allow parts to soak before washing. Do not clean any part of the grain mill in a dishwasher.

GRAIN MILL TROUBLESHOOTING GUIDE

PROBLEM	SOLUTION
Grain mill rocks from side to side when the handle is cranked.	Grain mill is not properly mounted and clamped. See page 4 for mounting instructions.
I am grinding corn, beans or similar sized item and very little or nothing seems to come out.	Larger sized items need to be pre-chopped into smaller pieces before mill will accept them. Use a blender or food chopper to cut into smaller pieces. See grinding tips on page 5.
The grain mill only grinds coarse no matter what I do.	Make sure the adjustment knob has the nylon tip on it (see page 6). For adjustment instructions see page 5. If problem persists please contact customer service.
I am trying to grind (X) and it doesn't seem to be working.	See page 5 for grinding tips. If problem persists please contact customer service.
Grain Mill is very hard to turn even with nothing in it.	Carefully follow adjustment procedure on page 5 making certain to turn knob back 1/4 turn after tightening all the way. Failure to do so can result in damage to the milling cone.

GROUNDING INSTRUCTIONS

This appliance must be grounded. In the event of malfunction or breakdown, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This appliance is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

DANGER – Improper connection of the equipment-grounding conductor can result in a risk of electric shock. The conductor with insulation having an outer surface that is green with or without yellow stripes is the equipment-grounding conductor. If repair or replacement of the cord or plug is necessary, do not connect the equipment-grounding conductor to a live terminal. Check with a qualified electrician or serviceman if the grounding instructions are not completely understood, or if in doubt as to whether the appliance is properly grounded. Do not modify the plug provided with the appliance – if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

If grain mill is jammed adjustment knob and milling cone and shaft must be removed to inspect and any clear obstruction.

Caution: If breaker trips immediately after plugging in or turning on do not bypass breaker and do not use motor. Contact Victorio customer service.

Motor specifications: 120 VAC, 60Hz, 60 watt.

MOTOR TROUBLESHOOTING GUIDE

PROBLEM	SOLUTION
Cannot attach motor	Review page 11 about how to attach motor, including how to correctly align motor shaft with grain mill shaft
Cannot remove motor	Review page 12 about how to remove motor. Sometimes motor shaft can get stuck or be difficult to remove see diagram on page 12
Motor is turning but grain mill is not grinding.	<p>Larger sized items need to be pre-chopped into smaller pieces before mill will accept them. Use a blender or food chopper to cut into smaller pieces. See grinding tips on page 5.</p> <p>Sometimes grain can become stuck and will not flow into grinding chamber. Tap on the side of the body below hopper using the plastic part of the crank handle.</p>
Motor stops turning or locks up when I am using it.	Some grains especially popcorn are very hard and will be difficult to grind. If the motor is stopping when you are grinding it means it is being overloaded and you will need to pre chop the grain.
Motor does not turn on	<p>Remove motor from grain mill.</p> <p>Make sure it is plugged into a live power outlet and that the circuit breaker above the switch on the side of the motor is not tripped. See page 13 for details about circuit breaker. Check to see that switch is in the ON position.</p>
